

Business Analyst Programs

Government agencies rely heavily on software in business operations and employ business analysts to communicate business needs to software developers. When analysts do not carry out their jobs effectively, the result is incomplete or incorrect requirements – leading causes of spiraling development costs and project delays.

Successful business analysts improve communication between different agency stakeholders and software developers by understanding the business requirements of projects and mapping those requirements to a solution. Our business analysis courses are written and delivered by professionals with extensive practical experience in business analysis. We incorporate realistic, scenario-based case studies in order to provide you with techniques and best practices you can immediately apply on the job. BUCEC's Business Analysts programs help organizations:

- Reduce development costs for new business applications
- Streamline the introduction of new products and services
- React quickly to new regulations
- Improve quality assurance

Who Can Benefit from Business Analysis Training?
